The invention relates to z81933-like peptides and their corresponding nucleic acids and methods for modulating gastric contractility, nutrient uptake, growth hormones, secretion of digestive enzymes and hormones. The sequences of the invention are used in the prevention, diagnosis and treatment of diseases associated with inappropriate Z31G33 expression. The nucleic acids of the invention and their complements are used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The Z31G33 peptides are used as antigens in need of restorative therapy. The Z31G33 peptides are used of antibodies against 251G33 and in assays to identify modulators of Z31G33 expression and activity. The anti-Z31G33 antibodies are also used as diagnostic agents for detecting the presence of Z31G33 in samples (e.g. by enzyme inked immunosorbent assay (ELISA)). The peptides and nucleic acids of the invention are used to modulate gastric contractility, nutrient uptake, growth hormones, the secretion of digestive enzymes and hormones, and/or acids of digestive enzymes and acidical secretion of enzymes and/or hormones in the pancreas. S21933-like DNA is used in gene therapy and s21933-like peptide. Is human zs1933-like peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
             2SIG33-Like peptides and polynucleotides, useful for modulating gastric contractility, nutrient uptake, growth hormones and/or secretion of digestive/pancreatic enzymes and hormones -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2SIG33-Like peptides and polynucleotides, useful for modulating gastric

The hyportion relates to Zayljarinke peptitos and Little tourisepouling nucleic acids and methods for modulating qastric contractility, nutrient uptake, growth hormones, secretion of digastive enzymes and hormones. The sequences of the invention are used in the prevention, diagnosis and treatment of diseases associated with inappropriate ZSIG33 expression. The nucleic acids of the invention and their complements are used as the nucleic acids of the invention and their complements are used as consistent of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The ZSIG33 and in assays to identify medulators of ZSIG33 expression and activity. The anti-ZSIG33 antibodies and antagonists are used to down regulate expression and activity. The anti-ZSIG33 antibodies are also used as diagnostic agents for detecting the presence of ZSIG331 in samples (e.g. by enzyme linked immunosorbent assay (ELISA)). The peptides and nucleic acids of the invention are used to modulate gastric contractility, nutrient uptake, growth hormones, the secretion of digestive enzymes and hormones, and/or hormones in the pancreas zsig33-like DNA is used in gene therapy and zsig33-like peptide. The peptide, as zsig33-like peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New polypeptides, useful for modulating gastric contractility, nutrient uptake, pancreatic secretion of hormones, digestive enzymes and treating gastrointestinal and growth related diseases, comprises

stimulate glucose-induced insulin release. They are also useful as research reagents for the expansion, differentiation, growth factor and hormone secretion and/or cell-cell interactions of tissues associated with gastrointestinal system, brain and central nervous system. These molecules are useful for treating dysfunction associated with contractile tissues or to suppress or enhance contractility in vivo and to treat gastrointestinal and growth related diseases. Zs331P peptides, nucleic acids and/or antibodies are useful for treating disorders associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  gastrointestinal motility, recruitment of digestive enzymes, inflammation and regulation of nutrient absorption. Sequences of the invention are useful in gene therapy. The present sequence is human zsig33-linker
                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to zsig33-like peptides (2S33LP) including zsig33-linker, zsig33-beta, zsig33-gamma, zsig-33-delta and zsig33-epsilon peptides and nucleic acid molecules encoding such zsig33-like peptides. Zs32LP peptides activate the immune system in boosting immunity to infectious diseases, treating immunocompromised patients such as human immunodeficiency virus (HIV) patients, in improving vaccines and in treatment of bacterial, viral, protozoal and fungal infections. Peptides of the invention are used to identify and isolate receptors involved in growth regulation in the liver, blood vessel formation and other developmental processes. They are useful for evaluating functions of hypothalamus-pituitary-adrenal axis, to modulate growth and/or differentiation of tumour cells, as additives to anti-hypodylycaemic preparations containing glucose and as adsorption the additive for oral days which require fast nutrient action and to
                                                                                                                                                                                                                                         New polypeptides, useful for modulating gastric contractility, nutrient uptake, pancreatic secretion of hormones, digestive enzymes and treating gastrointestinal and growth related diseases, comprises
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             with gastrointestinal contractility, secretion of digestive enzymes, hormone and acids, secretion of hormones in the pancreas and/or brain,
                                                                                                                                                                                                                                                                                                                                                                                                Claim 1c; Page 82; 89pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          οy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       QQ
                                                                                                                                       zsig33-linker, zsig33-beta, zsig33-linker peptides calculate and zsig33-linker, zsig33-beta, zsig33-linker, zsig33-beta, zsig33-geptides activate the immune system in boosting immunity to infectious alseases, treating immunocompromised patients such as human immunodeficiency virus (HIV) patients, in improving vaccines and in treatment of bacterial, viral, protozoal and improving vaccines and in treatment of bacterial, viral, protozoal and improving vaccines and in treatment of bacterial, viral, protozoal and improving vaccines and in treatment of bacterial, viral, protozoal and isolate receptors involved in growth regulation in the liver, blood vealuating functions of hypothalamus-pituitary-adrenal axis, to modulate growth and/or differentiation of tumour cells, as additives to antienhanders for oral drugs which require fast nutrient action and to simulate glucose and as adsorption enhancers for oral drugs which require fast nutrient action and to stimulate glucose induced insullin release. They are also useful as the expansion, differentiation, growth factor and hormone secretion and/or cell-cell interactions of tissues associated with gastrointestinal system, brain and central nervous system. These molecules are useful for treating dysfunction associated with contractile tissues or to suppress or enhance contractility in vivo and to treat gastrointestinal and growth related diseases. ZS33LP peptides, nucleic acids and or antibodies are useful for treating dysfunction associated acids and growth related diseases. ZS33LP peptides, nucleic

                                                                                                                                                                                                                                                                                                                      The invention relates to zaigi3-like peptides and their corresponding nucleic acids and methods for modulating gastric contractility, nutrient uptake, growth hormones, secretion of digestive enzymes and hormones. The sequences of the invention are used in the prevention, diagnosis and treatment of diseases associated with inappropriate ZSIG33 expression. The nucleic acids of the invention and their complements are used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The ZSIG33 peptides are used as antigens in the production of antibodies against ZSIG33 and in assays to identify modulators of ZSIG33 expression and activity. The anti-ZSIG33 antibodies are used to down regulate expression and activity. The anti-ZSIG33 antibodies are also used as diagnostic agents for detecting the presence of ZSIG31 in samples (e.g. by enzyme linked immunosorbent assertion of ESIG31 in samples (e.g. by enzyme linked immunosorbent secretion of digestive enzymes and hormones, and/or secretion of enzymes and zsig33-like peptide. zsig33-linker peptide.

In human zsig33-like peptide, zsig33-linker peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                 ZSIG33-Like peptides and polynucleotides, useful for modulating gastric contractility, nutrient uptake, growth hormones and/or secretion of digestive/pancreatic enzymes and hormones -

The invention relates to zsig33-like peptides (zS31LP) including zsig33-linker, zsig33-beta, zsig33-gamma, zsig-33-delta and scassig33-linker, zsig33-beta, zsig33-gamma, zsig-33-delta and such zsig33-like peptides and nuclaic acid moleculas encoding auch zsig33-like peptides. ZS31LP peptides activate the immune system in boosting immunity to infectious diseases, treating immunocompromised to patients such as human immunodeficiency virus (HIV) patients, in improving vaccines and in treatment of bacterial, viral, protozoal and fungal infections. Peptides of the invention are used to identify and consolate receptors involved in growth regulation in the liver, blood vessel formation and other developmental processes. They are useful for evaluating functions of hypothalamus pituitary-adrenal axis, to modulate growth and/or differentiation of tumour cells, as additives to anti-hypoglycaemic preparations containing glucose and as adsorption chhomocers for oral drugs which require fast nutrient action and to stimulate glucose-induced insulin release. They are also useful as research reagents for the expansion, differentiation, growth factor and chormone secretion and/or cell-cell interactions of tissues associated with gastrointestinal system, brain and central nervous system. These colorentials are useful for treating disorders associated diseases. ZS31LP peptides, nucleic and color and contractility in vivo and to treat catch and/or antibodies are useful for treation of diseases. ZS31LP peptides, nucleic with mastrointestinal and growth related diseases. ZS31LP peptides, or with mastrointestinal parameter of the contraction of diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      hormone and acids, secretion of hormones in the pancreas and/or brain, pastrointestinal motility, recruitment of digestive enzymes, inflammation and regulation of nutrient absorption. Sequences of the invention are useful in gene therapy. The present sequence is human zsig33-linker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             nutrient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 with gastrointestinal contractility, secretion of digestive enzymes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polypeptides, useful for modulating gastric contractility, nu uptake, pancreatic secretion of hormones, digestive enzymes and treating gastrointestinal and growth related diseases, comprises zsig33-like peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are concentration in cells. The peptides are ghrelin homologues and are concentration in cells. The peptides are ghrelin homologues and are concentrated in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide of the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth commone deficiency. The compounds of the invention are safe with an accompanying side effects. The present sequence represents a ghrelin-type growth hormone secretagogue (GHS) precursor protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Zsig33; gastric motility; gastrointestinal inflammation; reflux disease;
nutrient absorption regulation; obesity; metabolic disorder.
                                                                                                                                                                                                                                                                                                                                                                     New peptide compounds which induce growth hormone secretion and elevate cell calcium concentrations, useful in treatment and diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Length 116;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Identifying a cancer cell or tissue for treating prostate, ovarian, breast cancer, or benign prostatic hyperplasia, by detecting the expression of a ghrelin, an exon-3 deleted preproghrelin and/or a GHS-R
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a method for identifying a cancer cell or tissue of the reproductive system by detecting expression of a ghrelin, an exon-3 deleted preproghtelin and/or a GHS-H b protechis or nucleic acids. The antibodies, exon 3-deleted form of preproghtelin and antagonists are useful for treating cancer of the reproductive system such as prostate, owarian, breast, cervical or uterine cancer, choricoratinoma or benign prostatic hyperplasia. The present sequence is human exon 3-deleted ghrelin protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

AAZ98109 to AAZ98242 encode AAY87224 to AAX87357 which represent the human signal peptide-containing proteins HSPP-1 to HSPP-134. HSPPs have anticancer, anti-inflammatory, antimicrobial, nootropic, hepatotropic, neuroprotective, cardiovascular and antiasthmatic activities, and can be used in gene therapy. HSPPs can be used to treat or prevent disorders associated with increased activity or function of HSPP. Such diseases include cell proliferation (HSPP are used to treat or prevent disorders associated with increased activity or function of HSPP. Such diseases include cell proliferation (including cancer), inflammation, cardiovascular, neurological, creproductive or developmental disorders, (e.g. arteriosclerosis, cirrhosis, psoriasis, acquired immune deficiency syndrome, anaemia, asthma. Crohn's disease, microbial or other infections, congestive or ischaemic heart disease, Alzheimer's Parkinson's or Huntington's diseases, schizophrenia, ovulatory defects, muscular dystrophy). HSPP nucleic an be used for the recombinant production of HSPP, for detecting HSPP in standard hybridisation and amplification assays (for diagnosis and monitoring), in gene therapeutics, for detecting related sequences criplex-forming or ribozyme therapeutics, for detecting related sequences criplex-forming or ribozyme therapeutic agents), Ab are used to diagnose, or antagonists (potential therapeutic agents), Ab are used to diagnose, or monitor, HSPP-related diseases (in usual immunoassays), as therapeutic antagonists, in competitive drug screens, and for purification of HSPP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a protein designated Zsig33. The nucleic acids are strongly expressed in stomach tissue. The polypeptide (or alielite variants/orthologs) can be used to stimulate gastric motility, measured as increased transit time or gastric emptying of an ingested substance in mammals. The products are used to treat disorders associated with gastrointestinal cell contractility, secretion of digestive enzymes, gastrointestinal inflammation, reflux disease and nutrient absorption regulation. Zsig33 polypeptides may also be important neurologically, since the family of gut-brain peptides to which the homologous protein motilin belongs has been associated with neurological and CNS functions. They may therefore be used e.g. to regulate satiety or treat obesity and other metabolic disorders where neurological feedback modulates nutritional absorption. They are useful to identify zig33 agonists, antagonists and ligands and to produce antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

receptor complex that involves providing an immobilized receptor, and contacting the receptor with a zsig33 peptide (comprising residues 24-37 contacting the receptor with a zsig33 peptide (comprising residues 24-37 contacting the receptor binds to the zsig33 peptide. The method is useful for purifying cells, purifying a peptide, stimulating signal transduction in a cell expressing a receptor. It is also useful for method is useful for purifying cells, purifying a receptor. It is also useful for method contractility, nutrient uptake, secretion of digestive and parcreatic enzymes and hormones, secretion of insulin-like growth factor. It secretion of non-zsig33 proteins. It is useful for modulating growth commone secretion in a mammal having a disease associated with abnormal commones of growth hormone, such as osteoporosis, bone repair, bone remodeling, low osteoblast levels, cartilage repair and remodeling, skeletal dysplasia, immune suppression, obesity, growth retardation, skeletal dysplasia, immune suppression, obesity, growth retardation, dareful disorder requiring neutropathy associated dareful disorder requiring neutropathy associated gastrointestinal disorders, and stimulating glucose-induced insulin release in a mammal. The present sequence represents the human zsig33 release in a mammal. The present expresents the human zsig33 polypeptide, a peptide ligand for the G-protein coupled receptor, GHS-R.
 zsig33; signal transduction; hormone; enzyme; neural development; gastric contractility; nutrient uptake; digestive; pancreatic; human; insulin-like growth factor-1; growth hormone; bone; gastrointestinal; glucose; osteopethic; anorectic; vulnerary; immunomodulator; GHS-R:
                                                                                                                                                                     /note- "specifically claimed fragment that binds to the GHS-R"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Forming reversible peptide receptor complex for purifying cell and peptides, stimulating signal transduction and modulating hormone secretion, involves contacting a receptor with zsig33 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method of forming a reversible peptide
                                                                                                                                                                                                                                                                                                                                                                                               Deisher TA, Bishop PD;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, incupaths and central nervous system diseases, such as localised neuropathses and central nervous system diseases, such as lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, arthritis and inflammation, leukaemias and thrombolytic activity, arthritis and inflammation, leukaemias and constructs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence data for this patent did not form part of the printed

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghretlin homologues and are concentration in cells. The peptides are ghretlin homologues and are concentration a cid and/or a non-amino acid has been substituted by a modified amino acid and/or a non-amino acid has been substituted by a chormpasses the unmodified peptides; the DNA encoding the peptides vectors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide of the peptides consed by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with no accompanying side effects. The present sequence represents a ghrift in the invention are safe with an accompanying side effects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is that of zsig33, a secreted protein with homology to motilin (see AAB20102). Zsig33 is expressed at high levels in the stomach, and at lower levels in the small intestine and pancreas. A novel peptide fragment of zsig33, termed SGIP (see AAB20100), is claimed. SGIP is a ligand for growth hormone secretagogue receptor, and is therefore useful for modulating secretion of growth hormone and insulin like growth factor 1 SGIP, and variant SGIP peptides, are used in claimed methods for stimulating contractability in duodenum or jejunum tissue,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents human zsig33. The specification describes a short gastrointestinal peptide (SGIP), which is derived from zsig33. SGIP has homology to motilin. The SGIP peptide may be used in the prevention, diagnosis and treatment of diseases associated with languropriate SGIP expression. For example, SGIP may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of SGIP by expressing inactive proteins or to supplement the patients own production of SGIP SGIP may also be used as an antigon in the production of antibodies against SGIP and in assays to identify modulators of SGIP expression and activity. The anti-SGIP antibodies, agonists and antibodies may also be used to regulate expression and activity. The anti-SGIP antibodies against for detecting the presence of SGIP in samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         hormone secretagogue receptor.";
Trends Endocrinol. Metab. 12:118-122(2001).
-!- FUNCTION: Specific ligand for the growth hormone secretagogue
receptor type 1 (GHSR) inducing the release of growth hormone
the pituitary. Has an appetite-stimulating effect, induces
adiposity and stimulates gastric acid secretion. Involved in
growth regulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matsumoto M., Hosoda H., Kitajima Y., Morozumi N., Minamitake Y.,

Submitted (MAR-2001) to the EMBL/GenBank/DDBJ databases.
-!-FUNTION: Specific ligand for the growth hormone secretagogue receptor type I (GHSR) inducing the release of growth hormone from the pituitary. Has an appetite-stimulating effect, Induces adiposity and stimulates gastric acid secretion. Involved in growth regulation (By similarity).
-!- SUBCELLULAR LOCATION: Secreted (By similarity).
                                                                                                                                                                                                                                                                                                     Name=1; Synonyms=Chrelin;

TISSUE SPECIFICITY: Mainly expressed in the gastrointestinal tract with higher levels in the stomach, medium levels in the doodenum, jejunum ileum and colon. Low expression in the testis and brain.
Not detected in the salivary gland, pancreas, liver and lung.
FTM: O-n-octanoplation is essential for activity (By similarity).
SIMILARITY: BELONGS TO THE MOTILIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SEQUENCE FROM N.A. Trocessing of beca-amytous precursor, the process.

The secretase regulates transcription.";

J. Biol. Chem. 277:44195-4420[2002].

The secretase regulates transcription.";

The secretase regulates transcription.";

The secretase regulates transcription.

The secretase processed fragment, ALIDI, activates transcription activation through APBB1 (Fee5) binding. Couples to JIP signal activation through APBB1 (Fee5) binding. May interact with activation through APBB1 (Fee5) binding. Couples to JIP signal collipsed to Signal activation through binding to components of the extracellular activation and papers and collagen I.

The secretase processed fragments of the extracellular matrix such as heparin and collagen I.

The secretase processed fragments of the extracellular matrix such as heparin and collagen I.

The secretase transcription of several collagents and APBB and APBB and APBB and APBB family members, warkfalls and APBB and APBB and APBB family its its

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 with a revised bovine sequence.",
Invest. Ophthalmol. vis. Sci. 39:435-440(1998).

- FUNCTION: Critical component of the visual transduction cascade, controlling the calcium concentration of outer segments during light and darkness. Light causes a rapid lowering of cytosolic free calcium in the outer segment of both retinal rod and cone photoreceptors and the light-induced lowering of calcium is caused by extrusion via this protein which plays a key role in the process of light adaptation. Transports one Ca(2+) and one K(+) in exchange for four Na(+) (By similarity).

- SUBCELLULAR LOCATION: Integral membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                  MEDLINE-98138491; PubMed-9478004;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Title: Complete genome sequence of Pseudomonas aeruginosa PA01, an opportunistic patho
A; Reference number: A82950; MUID:20437337; PMID:10984043
A; Accession: G83609
A; Status: preliminary
A; Molecule type: DNA
A; Residues: 1-232 <STO>
A; Note: submitted to GenBank, June 1999
C; Comment: Ghreiin secreted by the stomach stimulates the release of somatotropin (growt C; Superfamily: motilin
C; Keywords: hormone; lipoprotein; stomach
C; Keywords: hormone; lipoprotein; stomach
